## THE NOMAD STUDIO PORTRAIT - PHOTOGRAPHIC EXCELLENCE WITH THE QW410 PRINTER

The Nomad Studio's experience with DNP QW410 printer has made us better professionals.

Today, we are so tackled and oversaturated with offers from thousands of brands, that in order to find something that really works and makes your life easier sounds impossible.

We came to DNP for their recognized expertise in dye sublimation printers. The problem was that at that time the printers that were on the market (2019) were too big and heavy for our use. The major drawback is that we use our motorhome as a nomadic professional photo studio. We move from one place to another with the studio and the photographic laboratory in tow. We set up our studio outside, taking advantage of the motorhome awning, and organized a digital development inside.

Our project is called «Nomad Studio» and it consists of touring small towns with the intention of photographing all their habitants and in turn create Photographic Portraits. The files are physically and digitally transferred to the historical archive of each town, we also offer a physical copy to each participant. I want to emphasize that we print a lot of photos.

*«The QW410 is a great printer condensed to the minimum.»*

With our nomadic project, the space and weight are vital, every centimeter and every gram matters too, so discovering this new completely portable printer and squeezing its capacity with more than 4,500 portraits printed in 10 weeks has been a real challenge, and we have been victorious. The QW410 is a great printer condensed to the minimum. We have printed all the photos in black and white and the results are excellent. In addition, the «curl function»,

the correction of the curl of the paper is unique. It's a great before and after for us. The power to share. That is what this printer has given us, the ability to share photos on paper with everyone in a matter of seconds. As if by magic and in less than 20 seconds a 10x15cm photograph is ready. Something unique! Thank you DNP for making such an exceptional printer and for believing in our project and us!
