ID+flex

Compliant ID photo printing system

DNP
Photo Imaging

Quick and easy to obtain compliant ID photos

The ID+flex solution makes it quick and easy to produce ICAO compliant ID photos. Consisting of the ID+ software and the ID600 dye-sublimation photo printer, this compact system requires little space and can be easily installed on any PC and in any environment.

All you have to do is take the picture, ID+flex takes care of the rest!

ICAO-COMPLIANT PHOTOS

ID+ software automatically analyses and crops ID photos in accordance with ICAO standards (ISO/IEC 19794-5) and local requirements.

Thanks to its 11 control points, it detects potential causes of rejection such as closed eyes, open mouth, wearing sunglasses, etc. The software then tells you quickly and easily whether the photo is compliant or not via a colour code. You can also print the ICAO certificate showing the results, a real added value for your customers. The assurance of obtaining a photo that complies with biometric standards!

MANY PRE-CONFIGURED TEMPLATES AVAILABLE

ID cards, passports, driving licences, visas and residence permits... ID+ software offers preconfigured templates for official documents from more than 150 countries!

You can also create your own templates very easily in the software, so you can easily meet all your customers' needs.

EPHOTO SERVICE

ID+ software provides the customer with a unique «photo code» used for doing online applications for official documents (ePassport in UK, driver's license and residence permits via ANTS service in France).

VARIOUS DEMATERIALIZATION OPTIONS

Offer additional, profit-generating services thanks to the dematerialisation options for ID photos included in the software: saving on a USB key and sending by email.

HIGH FLEXIBILITY

▶ **Free choice of hardware**

With the USB dongle, the ID+ software can be installed on any PC or tablet[1] . No additional investment or equipment required, you can use your own devices.

▶ **Diversity of image sources**

The flexibility of the software allows you to choose your operating mode: photos can come from a memory card, USB stick, camera connected by cable or wirelessly via a FlashAir™ reader or a specific internal folder. Opt for the easiest and fastest workflow for you!

[1]Subject to minimum requirements for software installation

GET ID PHOTOS IN 4 STEPS ONLY

1 Choose a country template

2 Select an ID type: card, passport, Visa, driver's license
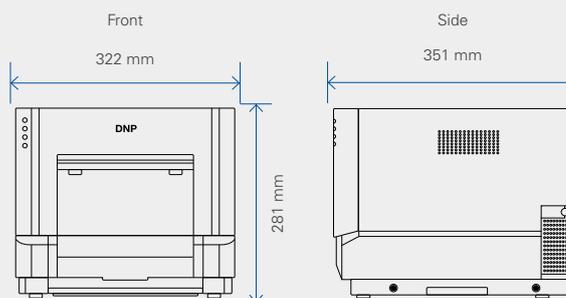

3 Get the biometric confirmation control print

4 Obtain your ID photo in 12.4 seconds
